

We manufacture horse timpani already since the 1920s. In the late 1990s they were re-released with some technical changes.

Our specially designed hammered bowls are made from copper and produce excellent volume whilst allowing the horse maximum mobility. Weatherproof special plastic heads offer a practical visual and acoustic alternative to natural skins.

Design features

Handhammered copper bowl with antique patina, steel-angle counterhoop and hand forged rosette fittings in forged-iron look, easy going square-head bolts

Item-#	Shell/Bowl (Inch)	Shell/Bowl (cm)	Tonerange	Heads	Tension Screws	Weight (lbs / kg)

Product Features

Liberty of action for the horse

Besides, the tension rods are shorter than on conventional drums and aim more towards the bowl so that the animal is not hindered.

Tension Screws

By a specially cut fine thread the screws can be turned very easily even at higher head tension. In addition, they are shorter...

Steel angle counterhoop

The steel angle profile is responsible for a maximum of strength and therefore guarantees a fine tuning at every point of the hoop...

Forged rosette fittings

The hand-forged rosette fittings are an optical link between the mechanical elements and the bowl.

Filigree baroque emblem

In etching As a flimsy filigree baroque emblem, the company logo „LF“ is etched onto the bowl in a standard method in the art...

Equipment
